# ATM/SST Access Control

ATM/SST PROTECTION: DESIGNED FOR ATMS WITH SEAMLESS INTEGRATION

## Virtually eliminate ATM site visits by using ATMInsight Access Control

ATMInsight-Access Control is a purely ATM/SST based solution designed to establish a barrier between the ATM and wide area network that locks down the ATMs by monitoring incoming & outgoing network traffic and decides whether to allow or block specific traffic based on a defined set of security rules. Banks have the flexibility of centrally

*ATMInsight-Access Control — an essential component of a bank's ATM fleet network security that protects the fleet from malicious activity, unauthorized access and cuts site visits*

creating rules that explicitly allow certain traffic, dropping all other traffic resulting in a secure and locked down environment.

Given the pervasiveness of unauthorized access & malicious activity, banks have much to gain by taking steps to reduce their attack

surface.

Remotely control USB access, change passwords, manage users, run remote commands, set firewall rules, etc.

### Flexible, Centralised Control

Distinguish between public and private traffic and centrally create rules that explicitly allow certain traffic.

### Secure & Fast

Uses enhanced security features to safeguard data without affecting performance.

### Specifically for ATMs

Designed only for Self Service Terminals.

### Key features and benefits:

- Centrally control USBs, firewall rules, passwords, users, run remote commands, etc
- Monitors incoming and outgoing network traffic
- Online 24/7 with central
- Real-time threat alerts
- Establishes a barrier between the ATM and wide area network
- Definable rules to limit access to the ATMs, effectively locking down the system
- Protects the ATM fleet from malicious activity and unauthorised access & by removing inherent vulnerabilities within the ATMs
- ATMInsight-Access Control is not a security patch but an integral part of our ATMInsight Advanced ATM Management solution
- Specifically designed for ATMs (and SSTs) only
