

# NetPatrol Monitoring

MONITOR HARDWARE, CPU, DISK, MEMORY, UPTIME, AVAILABILITY. CONTROL WIN UPDATES, SHUTDOWN, LOGOFF,

BUILT-IN TEMPERATURE AND HUMIDITY SENSORS. MONITOR SERVER ROOMS, SERVERS, ORACLE TABLESPACE, SYSTEM RESOURCES

HARDWARE INVENTORY, HISTORICAL REPORTING, OS INFORMATION, SYSTEM INSIGHT, EMAIL/ SMS ALERTS

REMOTE SERVER/PC MONITORING AND MANAGEMENT INCLUDING ENVIRONMENT (HUMIDITY & TEMPERATURE) MONITORING SOLUTION

## Simplifies Control, Management & Updates within your network

NetPatrol remote server monitoring is a solution which allows servers within an organisation to be monitored and managed from a central location. This method of remote server monitoring is quick, secure, reliable and cost effective.

NetPatrol allows full control over networked servers and PCs

NetPatrol monitors all critical aspects of an organisation's servers to ensure that potential issues are detected as soon as possible. System health monitoring includes disk space, disk availability, Oracle disk usage, CPU/ performance and processes and system uptime.

NetPatrol simplifies the process of server monitoring and management by automating the processes involved, securely and efficiently.

### Reduce Costs

By centrally managing servers there is no need to use time consuming manual methods to ensure server uptime and availability.

### Efficiency & Speed

The organisation's entire network of servers/PCs can be controlled, including Windows updates, shutdown, sleep, logoff, etc with 'one' click.

### Server Room Protection

Monitor the variation in humidity and temperature in multiple server rooms to protect your high value equipment.

### Alerts—Email & SMS

Intelligently escalate alerts for issues that are truly critical.

### Key features and benefits:

- Server/PC monitoring provides automated and realtime monitoring
- Increased efficiencies and savings as NetPatrol automates the monitoring process
- Reduction in organisation's personnel resources by reducing workload
- Server/PC management is centralised
- Reliable software that allows the organisation to improve its overall networking infrastructure
